Sharing Your Health Record for Direct Care

What is your health record?

Your health record contains all your accumulated clinical healthcare information relating to the care you have received. This may include face to face consultations, test results, clinics letters and prescribed medication. It is essential, when you may need medical assistance, that clinicians can securely access your health record. This allows them to view your medical background to help them make the best clinical decision relating to your direct care.

Why is sharing important?

Health records about you can be held in various places, for example, your GP practice and any hospital where you have had treatment. Sharing your health record will ensure you receive the best possible care and treatment wherever you are and whenever you need it. Choosing not to share your health record may have an impact on your future care and the treatment you receive. Below are some examples of how sharing your health record can benefit you:

Sharing your contact details	This will ensure you receive results and appointments without delay
Sharing your medical history	This will ensure emergency services accurately assess you if needed
Sharing your medication list	This will ensure that you receive the most appropriate medication
Sharing your allergies	This will prevent you being given something to which you are allergic

Is my health record secure?

Yes. There are safeguards in place to make sure only organisations you have authorised to view your records can do so.

Can I decide who I share my health record with?

Yes. You decide who has access to your health record. For your health record to be shared between organisations that provide care to you, your consent must be gained.

Can I change my mind?

Yes. You can change your mind at any time about sharing your health record, please complete a new form.

Can someone else consent on my behalf?

If you do not have capacity to consent and have a nominated Lasting Power of Attorney, they may consent on your behalf. If you do not have a Lasting Power of Attorney, then a decision in best interests can be made by those caring for you.

What about parental responsibility?

If you have parental responsibility and your child is not able to make an informed decision for themselves, then you can decide about information sharing on behalf of your child. If your child is competent then this must be their decision.

What is your Summary Care Record?

Your Summary Care Record contains basic information including your contact details, NHS number, medications and allergies. This can be viewed by GP practices, hospitals and the Emergency Services. If you do not want a Summary Care Record, please complete the opt out form on the next page. With your consent, additional information can be added to create an Enhanced Summary Care Record. This could include any active care plan or a DNAR (Do not resuscitate) which will help ensure that you receive the necessary and appropriate care in the future.
